

### Product Overview

The NSiP882x devices are dual-channel digital isolators with integrated isolated DC-DC converter. The isolated DC-DC converter provides up to 500mW output power using on chip transformer. The feedback PWM signal is sent to primary side by a digital isolator based on Novosense capacity isolation technology. The high integrated solution can help to simplify system design and improve reliability. The NSiP882x device is safety certified by UL1577 support 4.5kVrms withstand voltages, while providing high electromagnetic immunity and low emissions. The data rate of the NSiP882x is up to 150Mbps, and the common-mode transient immunity (CMTI) is up to 150kV/us. The NSiP882x devices provide 5V to 5V, 5V to 3.3V, 3.3V to 3.3V conversion mode, the output voltage can be set by SEL pin. The logical level of digital isolators on left side can be set by VDDL pin which can support the application when the supply voltage and I/O voltage level are different.

### Key Features

- Up to 4500Vrms Insulation voltage
- Power supply voltage: 3.3V to 5.5V
- 5V to 5V, 5V to 3.3V, support 100mA load current
- 3.3V to 3.3V, support 60mA load current
- Over current and over temperature protection
- Date rate: DC to 150Mbps
- High CMTI: 150kV/us
- Propagation delay: <15ns
- High system level EMC performance:
  - Enhanced system level ESD, EFT, Surge immunity
- Operation temperature: -40°C~125°C
- RoHS-compliant packages:

SOW16

### Safety Regulatory Approvals

- UL recognition: up to 4500V<sub>rms</sub> for 1 minute per UL1577
- CQC certification per GB4943.1-2011
- CSA component notice 5A
- DIN VDE V 0884-11:2017-01

### Applications

- Industrial automation system
- Isolated SPI, CAN, RS485
- General-purpose multichannel isolation

## 7. Function Description

### 7.1. Overview

The NSiP882x devices are dual-channel digital isolators with integrated isolated DC-DC converter. The digital isolators are based on Novosense capacity isolation barrier technique. The isolated DC-DC converter provides up to 500mW output power using on chip transformer. The feedback PWM signal is sent to primary side by a digital isolator based on capacity isolation technology. The NSiP882x device are safety certified by UL1577 support 4.5kVrms insulation withstand voltages, while providing high electromagnetic immunity and low emissions. The data rate of the NSiP882x is up to 150Mbps, and the common-mode transient immunity (CMTI) is up to 150kV/us. The logical level of digital isolators on left side can be set by VDDL pin which can support the application when the supply voltage and I/O voltage level are different.

The high integrated solution can help to simplify system design and improve reliability. The NSiP882x devices are suitable for the limited PCB space applications. The devices are also suitable for wide temperature application which the most the power module can not support.

## 7.2. Device Functional Modes

The NSiP882x devices provide 5V to 5V, 5V to 3.3V, 3.3V to 3.3V conversion mode, the output voltage can be set by SEL pin. Supply configuration table showed below.

SEL PIN	VDD	VISO
Shorted to VISO	5V	5V
Shorted to GND2 or floating	5V	3.3V
Shorted to GND2 or floating	3.3V	3.3V

The NSiP882x devices provide four channel digital isolators. The digital isolators have default weak pull up or pull down input status when input is floating as shown in below table.

Input	VDD1 status	VDDOUT status	Output	Comment
H	Ready	Ready	H	Normal operation
L	Ready	Ready	L	
floating	Ready	Ready	L(NSiP882xW0) H(NSiP882xW1)	Floating input status

## 7.3. Emi Considerations

The NSiP882x devices are using on chip transformer, so the power transfer must operate at high frequency allow higher efficiency transfer using the small transformer. This will cause emissions which need to pay attention to PCB layout if the application allow low emission. Please see the application note if needed.

## 7.4. Output Short And Over Temperature Protection

The NSiP882x devices are protected against output short. When the devices detect the output is short, the device will be in Hiccup mode and the transfer power will be limited. So the temperature of the device will be low, and the device is protected.

The NSiP882x devices are also protected against over temperature. When the devices detect the chip is over 165 °C, the device will be shut down until the temperature of the device is below 145 °C.

# 8. Application Note

## 8.1. Typical Application

The NSiP882x requires a 0.1 µF and 10uF bypass capacitors between VDD and GND1, VISO and GND2. The capacitor should be placed as close as possible to the package. This is very important for the performance of the device. The figure 8.1 is the basic schematic of NSiP882x and the figure 8.2 is the typical isolated CAN schematic using NSiP8821.

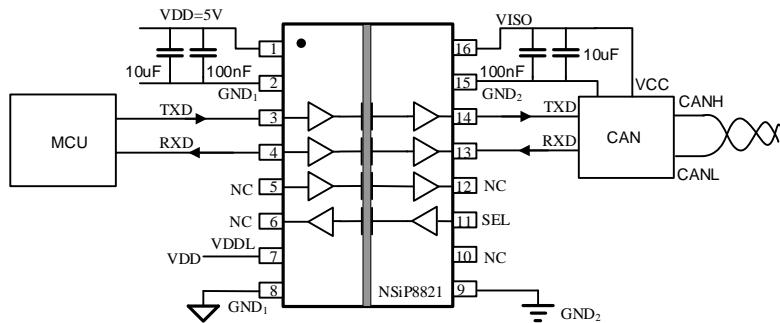

Figure 8.2 Isolated CAN schematic using NSiP8821

## 8.2. Pcb Layout

The recommended PCB layout shown below. The low ESR capacitor C1 should be closed to PIN1 and PIN2, the distance should be less than 1mm. The low ESR capacitor C3 should be closed to PIN15 and PIN16, the distance should be less than 1mm.
